```cpp
class Solution {
public:
int distanceTraveled(int mainTank, int additionalTank) {
int totalFuelUsed = 0;
while (mainTank >= 5) {
mainTank -= 5;
totalFuelUsed += 5;
// If there's fuel in the additional tank, transfer 1 liter
if (additionalTank > 0) {
additionalTank--;
mainTank++;
}
}
// Add any remaining fuel in the main tank
totalFuelUsed += mainTank;
// Mileage is 10 km per liter
return totalFuelUsed * 10;
}
};
```
